## PUBLIC NOTIFICATION

### Mandatory Segregation of Solid Waste at Source by Citizens

Jaipur City produces about 1900- 2000 tons of solid wastes daily. The collection of waste, street sweeping, transportation & disposal of waste has to be done as per SWM Rules 2016. As waste is not being segregated at source so scientifically processing of un-segregated waste is very difficult. Hence, source segregation of solid wastes is essential for proper disposal of solid waste. Therefore, public has been asked to segregate the waste at source. In this direction many awareness programmes have been conducted by Jaipur Nagar Nigam and M/s. BVG India Limited.

In order to process/reuse the segregated wet & dry waste, One Compost Plant and One Refuse Derived Fuel Plant have been established and one Waste to Energy Plant is also going to be established in coming future. Hence, it becomes necessary to segregate at source for scientific processing in these plants. As the problem of waste disposal can be solved only by segregating of waste at source, proper collection and scientific management. Citizens are required to compulsorily segregate the waste at the household level and at commercial establishment into wet, dry and domestic hazardous wastes.

### **Indicative List For Segregation Of Household Wastes**

<b>Wet Waste (Green Bin)</b>	<b>Dry Waste (Blue Bin)</b>	<b>Domestic Hazardous</b>
